

# ECSE 428 Weekly #05 | MINUTES

Date	2022/02/23	Location	Zoom/In-Person
Time	1:35	Purpose	Week 3 Prep
Facilitator	Alexandru	Minutes	Dan
Absent	Kiro		

## Meeting Agenda

1. Discussion Preparation for Week 3.
2. Concerns

## Discussion Topics

### Discussion Preparation for Week 3

- What needs to be done:
  - **A zoom meeting video** that shows all of the gherkin tests running automatically with results (automated scripting)
    - Mircea says that we can have testing for smart contracts
    - Go through each gherkin file, explain what user story/tasks to be tested.
  - **Documentation** (Scrum master tasks)
    - Need help with the Wiki page?
    - Priority right now is the code
  - **Task lists completed (as usual)**
- How do we store nfts?
  - With the listings.
- What do we have in our backend right now?
  - Collections
  - Listings
  - Users

- We could create the framework/structure of a listing for this week to prepare for Sprint B.
- Demo of smart contracts by Mircrea:
  - Blockchain.js just like Facebook.js
    - Contains methods
  - To create nfts, use the mintnft() method
  - For whatever reason, he can't call from the website yet.
    - Should be done by this evening
  - What it's doing, it is taking the address from the metamask wallet and storing it into the blockchain.

### Concerns

- What is a collections (harsh):
  - Is like an album of photos. Regroup nfts together.
- Frontend testing (kalvin):
  - Due on Sunday?
  - Can send some links to work on frontend testing.
- How should we display the nfts on the frontend:
  - Smaller, gridbase 3 columns with a title.
  - Title the same as the description?
  - Or we could have the user
- Kiro made user profile page
  - On user Profile page, have two tabs
  - 1 tab dedicated for IG content.
  - 1 tab dedicated for nft content.
- Gherkin scripts:
  - Focus gherkin scripts on backend more than backend
  - For example, US015
    - Ask the delete button on the collection page.
    - Do it in the backend.
- US015 Delete collection:
  - Just like an album, regrouping common nfts together.
