

Project Proposal

ECSE 428

Group 20, Winter 2022

We are NF-TEA

The project we aim to put forward is a Web3 powered platform directed at content creators and influencers. The web application will allow its users to convert social media content from their Instagram accounts into Non-Fungible Tokens (NFTs). These will then be available for users to acquire and sell as tradable assets, using Ethereum (ETH) as a store value.

MetaMask's hot wallet functionalities will be leveraged in order to provide users with the option to interact and discharge their assets from our platform. Purposed as such, the NFT platform will create a convenient user experience in web environments. It should also be light enough to be used on most devices, from mobile devices to desktop computers.

Scrum Master

For the duration of the first sprint, we nominate:
Alexandru BANGALA as our first Scrum Master.

Proxy Product Owner

For the duration of the first sprint, we nominate:
Dan HOSI as our first Proxy Product Owner.
